1. There's a picture of a shopping bag on the taskbar at the bottom of your screen. Click that.

2. In the upper-right corner of the screen, there's a Search Box. Copy the following and paste it into that search box: Switch Out of S Mode

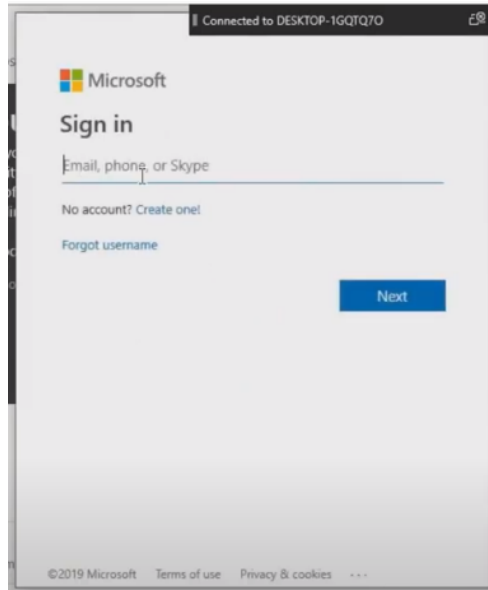

3. It will search and you'll see a big "Switch Out of S Mode" picture with a button that should say "Get" on it. Click that.
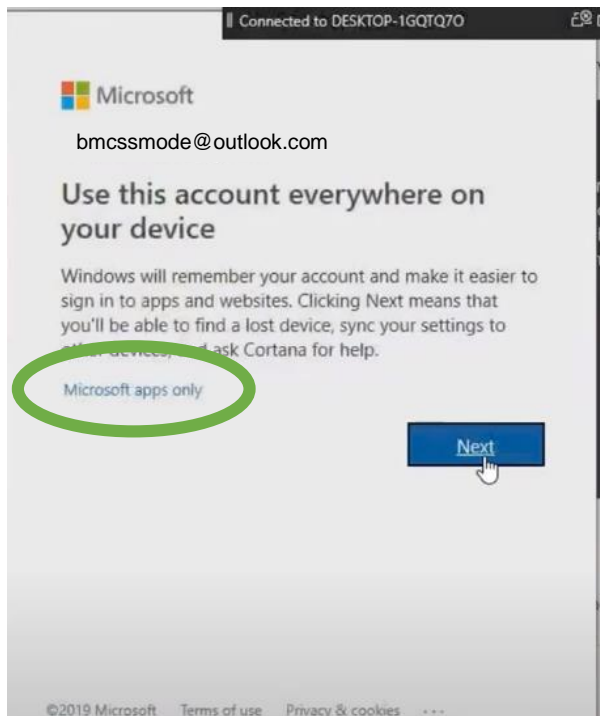

4. If it asks you for your Microsoft account information, use:

    Email: bmcssmode@outlook.com

    Password: SwitchMe!

5. It might ask if you want to add that account to your computer. There should be a link that says
    something like "Microsoft apps only" or "for this app only". Click that. **Don't just click Next**…it
    might change your login information for your laptop.

6. You should see a message that says "You're All Set". You can click Close on that. If you made it that far, S Mode is gone forever and you should be able to install Lockdown Browser.

You're all set!

You're all set!

You have switched out of S mode and can now install apps from outside the Store.
